

BENDING TECHNIQUES FOR X-RAY ELASTIC CONSTANTS DETERMINATION

I.C. Noyan, IBM, Yorktown Heights, NY, S.K. Kaldor, Columbia University, New York, NY

4- point bending of brittle substances is the classical method for determining their x-ray elastic constants. This technique, however can be subject to significant errors if the rig and the samples are not properly designed. In this talk, we will discuss 4-point bending theory and its applicability to XEC determination.
