High Temperature Beryllium Window Replacement for XRF Detectors
Jonathan Abbott, Kevin Black, Josh Wong, Mallorie Harker
Moxtek, Inc., Orem, UT, USA

We will report on the development of a beryllium window replacement system capable of process temperatures in excess of 400°C. The resulting system shows good resistance to mechanical shock and fatigue. X-ray transmission characteristics will be presented. The resistance to environmental and chemical attack and the hermeticity is also characterized.
